| Manufacturer | SimCPR BV |
| Warranty | 2 years |
| Replaceable battery (3V) | 100 operator hours |
| End-user Price | € 99,- (ex.VAT) |

SimCPR® Pro Trainer is a wristband with accelerometer for measuring chest compression depth and rate. Users get accurate feedback with LED-lights and/or with bluetooth connected training software.

The wristband is an easy and effective training tool for improving CPR-quality.

The red flashing LED indicates that compressions are not deep enough (< 5cm/2 inches) and/or there is no full recoil of the chest.

The green flashing LED indicates that compression-decompression is adequate, but the rate is too fast or slow.

When both depth and rate are correct the green LED is continuously on.

Extra feedback and scores are possible with the free **SimCPR® Trainer-app** (Android/iOS-smartphones) and other compatible (AR/VR) CPR training software with SimCPR®-logo.
